Deliberative Dilemmas:
A Critique of Deliberation Day from the Perspective of Election Law
Chad Flanders*

I. Introduction: Why Aren’t Deliberative Democrats and Election Lawyers Talking?

In recent years, political philosophy has been largely dominated by theories of deliberative democracy, such as the ones offered by Jurgen Habermas in his monumental Between Facts and Norms¹ and Amy Gutmann and Dennis Thompson in their lucid Democracy and Disagreement.² The key concept for deliberative democrats is conversation: the exercise of political power, according to deliberative democrats, is only legitimate when it is justified by conversation and (ideally) agreement with other citizens, based on reasons that they can all understand.³ In developing this ideal of conversation, deliberative democrats have been pointedly in opposition to theories of democracy that see the exercise of power (perhaps cynically) as simply a matter of bargaining and balancing interests, rather than a rule of “deliberative reason.”⁴ However, this has put

² AMY GUTMANN & DENNIS THOMPSON, DEMOCRACY AND DISAGREEMENT (1996). See also DELIBERATIVE POLITICS: ESSAYS ON DEMOCRACY AND DISAGREEMENT (Stephen Macedo, ed., 1999). Other important collections on deliberative democracy are DEBATING DELIBERATIVE DEMOCRACY (James S. Fishkin & Peter Laslett, eds. 2003) and DELIBERATIVE DEMOCRACY: ESSAYS ON REASON AND POLITICS (Jon Elster, ed. 1997).
³ Versions of this idea can be found in JOHN RAWLS, POLITICAL LIBERALISM (1991) and Joshua Cohen & Charles Sable, Directly-Democratic Polyarchy 3 EUR. L.J. 313 (1997).
⁴ For classics in this area, see JOSEPH SCHUMPETER, CAPITALISM, SOCIALISM AND DEMOCRACY (1942), THEODORE LOWI, THE END OF LIBERALISM (1969); and more recently see RICHARD POSNER, LAW, PRAGMATISM AND DEMOCRACY (2003).
pressure on deliberative democrats to show that their theories are not merely idle speculation (or mere talk), but can actually be put into practice. If the interest theory of democracy aimed low, at least it gave a plausible description of how democratic politics worked and could work. As a result of challenges to its practicality, deliberative democratic theory, in the words of one prominent deliberative democrat, “has moved beyond the ‘theoretical statement’ stage and into the ‘working theory’ stage.”

Around the same time as the rise of deliberative democracy in political theory, the study of law was witnessing an increasing interest in the practice of elections. Although Bush v. Gore in some ways now represents the key moment in the rise of election law as “its own field of study,” legal theorists had already been remarking on the gradual “constitutionalization of democratic politics.” According to a path-breaking Harvard Law Review Forward by Richard Pildes, the Supreme Court has been making decisions about elections that assume, even if they do not explicitly articulate, a theory about democratic structure: how elections should be run, who should be able to vote, etc. In many cases over the past few years, Pildes says, the Supreme Court has been slowly developing a theory of democracy that emphasizes order and stability over robust competition. And as further evidence of the Supreme Court’s lurch into political theories of democracy, in an opinion involving the representation of African-Americans in Georgia, Justice Sandra Day O’Connor needed to rely on the work of Hannah Pitkin in

---

7 Questions about legitimacy of election law as an important area of study were largely pre-Bush v. Gore. See generally Symposium, Election Law as Its Own Field of Study, 32 Loy. L.A. L. Rev. 1095 (1999); Samuel Issacharoff et al., The Law of Democracy (2002).
9 Richard Pildes, Democracy and Disorder, in The Vote 140 (Cass Sunstein & Richard Epstein, eds. 2001).
order to distinguish between two types of representation. The Court’s recent, and increasing, intervention into the law of elections shows, according to election scholars, that the Court is slowly involved in hammering out a “law of democracy.”

Given the evident and even patent relationship of these two fields – political theory and election law – and the trend of one (political theory) towards the more practical and the trend of the other (election law) towards theory, one would expect there to be a burgeoning and fruitful exchange between the two disciplines. Deliberate democrats would need to be aware of the constraints on democratic decisionmaking imposed by Supreme Court decisions (and election law more generally) in order to make sure their proposals are feasible and sensitive to real-world conditions. And election law theorists would need to have a grounding in political theory in order to make theoretical sense of the Supreme Court’s jurisprudence, and to offer intelligent critiques of them. In short, one would have expected a convergence on what Dennis Thompson has recently called “midrange principles,” that is, neither broad principles (on the level of deliberative democracy) nor simply case by case analysis (as in election law) but reflection on “principles of electoral justice ... and their relation to electoral institutions.”

Unfortunately, very little of this has taken place. Even in the book from which I just quoted, Dennis Thompson does little to connect his larger theory of deliberative democracy to his proposed institutional changes, and his book reads more like a primer on election law for philosophers. Although Thompson does a good job of identifying the gap in the current literature, his book has not gone a very long way towards filling it.

11 See ISSACHAROFF, supra note 7.
12 DENNIS THOMPSON, JUST ELECTIONS viii (2002).
My Essay tries to show the ways in which deliberative democrats and election law theorists need each other. I do so by examining in detail one proposed reform of American democracy along deliberative lines, offered by Bruce Ackerman and James Fishkin in their book *Deliberation Day*. The focus here is partial, but not, I think unwarranted. Ackerman and Fishkin’s book represents a bold and rigorously formulated effort to make voting more reflective, and citizens more engaged in voting. However, in the course of their proposals, they miss how key elements of the structure of American election law threaten to make “deliberation day” into less of an arena for wide-ranging democratic deliberation than it could be and to introduce deliberation into areas where we might prefer that it not be.

In one respect, my criticism of Ackerman and Fishkin is similar to a criticism made about democratic theory in the abstract: it is said that deliberative democracy, although it purports to be inclusive, actually excludes some viewpoints, and artificially restricts dialogue. For example, Bruce Ackerman’s earlier book, which emphasized dialogue as a way of justifying political principles, was criticized for artificially excluding “some certain conceptions of the good life” by “privatiz[ing] them and push[ing] them out of the public debate in the liberal state.” I do not claim that Ackerman and Fishkin’s proposal purposefully excludes some voices, only that by relying on certain features of American electoral structure, they miss the ways in which deliberation might be biased, or unproductive, or incomplete. The point is, no

---

13 Bruce Ackerman & James Fishkin, Deliberation Day (2004) (hereinafter Deliberation Day). Earlier work by the two authors laid the groundwork for their collaboration. See Bruce Ackerman, Social Justice in the Liberal State (1986); 1 We the People: Foundations (1991); and James S. Fishkin, Democracy and Deliberation (1991).

deliberation takes place in a vacuum, and it pays to be aware of the structures that will inevitably dictate the direction and even sometimes the outcomes of deliberation. In the case of deliberative democracy, that structure, at least in the American context, is provided by election law, and (at the limit) the Constitution.

In what follows, I look at three areas of election law that Ackerman and Fishkin fail to appreciate. These areas are: the law regarding political parties, political gerrymanders, and the racial districting. In the first two areas (parties and political gerrymanders), the problem is how protection for existing political parties might skew deliberation towards the extremes of left and right, and work to exclude voices that might be diverge from the lines of the two major parties. Interestingly, Ackerman and Fishkin not only do not challenge the two party system, they even embrace it, using the major political parties as key functionaries in the management of “deliberation day.” In the third area (race), the problem is more subtle. It involves the question of whether deliberation of the kind favored in *Deliberation Day* is in tension with deliberation at another level, namely at the level of Congress. Sometimes, in the pursuit of better deliberation at a different level, we might prefer that there be less citizen-level deliberation rather than more. For example, we might want to guarantee some “safe” minority Congressional seats, which may contribute to better deliberation at the Congressional level because of the presence of more diverse voices.

Ackerman and Fishkin’s relative neglect of these important areas of election law point points to a larger theme that I want to sound in my paper, which is the following. Sometimes there will be inevitable trade-offs between the kinds of deliberation we want. Do we want better deliberation at the citizen level, or at the representative level? We
may have to choose. So too, we might have to choose between deep debate between two
parties, and a more wide-ranging debate between multiple parties in a presidential
election. And again: there may be a choice we have to make between inadequate
deliberation now, and better deliberation later. Should we choose in favor of immediate
yet inadequate deliberation, or do we wait for more structural reforms to be made? There
are trade-offs that election law forces us to make, I argue, and it pays to be aware of those
trade-offs. What Ackerman and Fishkin implicitly do is to make certain choices in their
proposal for one electoral regime over the other without justifying their choices. But
greater attention to the current structure of American election law can make us aware of
the costs and benefits of choosing one deliberative regime over another. It can also show
us that in each of these three cases, the implicit choices that Ackerman and Fishkin will
result in worse deliberation rather than better deliberation.

Finally, my paper tries to show that attention to the structure of American election
law teaches us another key lesson, which is that sometimes the best means to get to the
ideal of deliberation are not to be achieved by more deliberation. Ackerman and Fishkin
work from the bottom-up. They believe that if citizens are more deliberative, then the
President and Congress and politics more generally will be more deliberative, that if
deliberation day succeeds, “everything else would change.”15 Better deliberation among
citizens would have effects across the entire political structure, from the quality of
candidates to the influence of money to the structure of political parties.16 My suggestion
is that top-down reforms are also necessary, and in some cases need to take priority over

15 DELIBERATION DAY 3.
16 Id.
deliberative ends, if we want to achieve some of the goals Ackerman and Fishkin (and I) hope to reach.

II. Parties

I propose to consider the relationship between theories of deliberative democracy by looking closely at one particular proposal, viz., the idea for deliberation day defended and articulated by Bruce Ackerman and James Fishkin. Why this one? Certainly there are other proposals, such as Ethan Leib’s suggestion of a fourth branch of government.\(^{17}\) Two reasons counsel in favor of choosing Ackerman and Fishkin (apart from the fact that it seems to me the proposal most fully worked out and imagined). First, Ackerman and Fishkin’s proposal is bold and comprehensive, affecting at the limit both presidential and congressional elections. Its sweep and its radicalness allow us to see the defects institutionalizing deliberative democracy might have in especially bright relief: the problems with deliberative democracy and election law will show up here, whereas they might not be as obvious in smaller scale, incremental reforms. At the same time, Ackerman and Fishkin’s “deliberation day” experiment seems at the same time realistic – they themselves characterize it as an exercise in “realistic idealism.”\(^{18}\) By this, I mean not only that they take seriously questions of cost and implementation, but also that deliberation experiments have been made, on a large scale by Fishkin’s deliberative polling\(^{19}\) and on smaller scale in communities in Colorado and Connecticut. If I am right about some of my criticisms of the larger scale program, this will give us reason to look

\(^{17}\) Ethan Leib, Deliberative Democracy in America (2004).
\(^{18}\) Deliberation Day 13-4.
\(^{19}\) Fishkin, supra note 13.
more carefully at the smaller, more incremental instantiations of deliberation day. It is hard to imagine small steps to a fourth branch of government. So, oddly, both because of its boldness and its potential for immediate realizability, Ackerman and Fishkin’s proposal seems the best one to analyze. Its boldness will make its errors (should there be any) easier to spot, and its immediate realizability makes it the one that we should give closest scrutiny because, at a smaller scale, it is already being used.

What then is the proposal? Ackerman and Fishkin propose that we set aside a national holiday, before elections (first for presidential elections, and then later on, for Congressional elections as well), for citizens to debate the issues of the campaign. The process of preparing for deliberation day begins one month before the actual date, by asking the candidates to identify one or two “important issues” confronting the nation. “Within a two-party framework,” Ackerman and Fishkin write, “this query will generate two to four themes that will structure the conversational run-up to Deliberation Day,” which is held about two weeks before elections. On “Deliberation Day” itself, the two (in this case, presidential) candidates will debate, and citizens will gather in groups throughout the nation to watch the debate. After the debate is done, the groups that have met to watch the debate will break up into still smaller groups (of fifteen or so). The (smaller) groups of fifteen will debate among themselves for forty-five minutes, and choose questions to ask the representatives of the campaigns in their larger group “citizen

---

20 To be fair, there have been smaller “citizen” panels that Leib relies on for examples of his proposal on a smaller scale. But it still seems a large leap to an entirely new branch of government. On Ackerman and Fishkin’s proposal, we can see more realistically how small examples of deliberation might grow into a full scale deliberation day.
21 A compressed version of their proposal can be found in Bruce Ackerman & James Fishkin, *Deliberation Day* 10 J. POLIT. PHILOS. 129 (2002).
22 DELIBERATION DAY 24.
assembly.” In the citizen assembly itself, a moderator will ask “local party officials”\(^{23}\) questions selected from the list of questions prepared by the smaller groups. After lunch, the citizens again meet with their small groups, make a list of supplemental questions, which are then asked of party representatives at a second citizen assembly. The citizens meet in small groups a last time, and deliberation day is over. Two weeks later, they vote.

Ackerman and Fishkin make no bones about the demands such an arrangement would place on party organization. As is clear from the description of deliberation day, much depends on the citizens’ assembly – where local party officials answer questions from the gathered small groups. Indeed, Ackerman and Fishkin tout it as one of the benefits that it will revitalize local party organization. “For the first time in a long time,” they write, “it will no longer make sense for presidential campaigns to operate independently of local party organizations.” “How else,” they continue, “will they be able to find tens of thousands of respected local leaders to represent the national candidate at the citizen assemblies?”\(^{24}\) But such a demand for personnel, it seems almost too obvious to state, will only be able to be met by the well established political parties, i.e., Republicans and Democrats. It would be impossible for third parties – even third parties will some national following – to be able to compete with the major parties in providing people to represent them on deliberation day. And the lack of a representative will be obvious: the two parties will have their representatives, fielding questions and answering them, while the third party candidate will have no one to defend him or her (even if the candidate does well in the debate), simply because they lack the people.

\(^{23}\) Id. at 30.  
\(^{24}\) Id. at 32.
Ackerman and Fishkin’s mention, in a footnote, that should a third party candidate win the support of “15 percent or more of the votes in leading opinion polls” then he or she would be eligible for deliberation day (20 percent for Congressional races). But this restriction seems almost an afterthought, insensitive to the organizational demands deliberation day would put on any but the two major parties. Even were a third party candidate able to poll well in the run up to election day, this still wouldn’t be sufficient to make up for the lack of organizational and managerial support.

Why does this matter? It matters because it affects the quality and the diversity of deliberation on deliberation day, by further entrenching the advantage the two major parties have in getting their message out. If no one shows up to represent the third party candidate at deliberation day (supposing that the third party candidate wins the required fifteen percent in public opinion polls), it will not only make the third party look bad, because no one will be there to defend the candidate’s position on issues or to articulate them further in response to questions, but the citizens in the citizens’ assembly will be deprived of the opinions and the facts that the third-party candidate representative could bring to the table. Debate will be poorer, because not representative of the full range of opinion. Although the questions asked to representatives of the two major parties might be influenced by the presences of the third party candidate in the televised debate (again, if that candidate had 15 percent support in the polls), the fact that the major party representatives would be the only ones there to debate and answer the questions will affect how that question is treated. Imagine how the moderator of the citizen assembly will have to announce to the citizen assembly that “Regrettably, there is no one here to defend the (Green, Conservative, etc.) party, so you will only be able to ask questions of

25 236n. 11. It is interesting that Ackerman and Fishkin rely on a poll here.
the Democrat and Republican representatives.” Alexander Meiklejohn famously stated
the ideal of democratic debate was a debate in which everything that was worth saying
was said.26 In the world of deliberation day, only that gets said which has sufficient
institutional support.

The point here is a structural one: it is about how the structure of deliberation day
focuses debate in a certain way, and maintains the two-party system and prevents serious
challenges to it. Deliberation day does not merely reproduce those difficulties but
amplifies them: first, by restricting the televised debate to only those candidates who can
get 15 percent approval in the polls27 and second, by erecting a practical barrier against
representation in the citizen assemblies. And in doing this, Ackerman and Fishkin, with
or without realizing it, are siding with the Supreme Court’s recent decisions in this area,
which has in many ways helped foster the continued entrenchment of the major parties.
In Richard Pildes’ telling, the bias in the Supreme Court’s election law jurisprudence has
been towards protecting major parties, and their distinctiveness. This two-party
entrenchment has been visible in many ways, from the Court preventing parties from
opening their primaries to independent voters, to keeping third parties off the ballot and
making it harder for them to participate in televised debates. From the Supreme Court’s
perspective, according to Pildes and others, the goal is for stable elections, in the sense of
avoiding the potential “disorder” and “confusion” of multiparty and multi-candidate

26 ALEXANDER MEIKLEJOHN, POLITICAL FREEDOM: THE CONSTITUTIONAL POWERS OF THE PEOPLE 26
(1965).
27 The problem of limiting televised debates to only candidates who were perceived as “legitimate” (i.e.,
had a certain amount of support in the polls) was explored in the case Arkansas Educational Television
Commission v. Forbes, 523 U.S. 666 (1998), with the Court giving great leeway to a public television
station to choose whom it wanted to invite to the debates.
elections. These decisions show the way that, in Pildes words, “constitutional law now limits the structural changes through which disaffection with the current practices of democratic politics can be given institutional expression.”

The current system entrenches the two parties, by allowing them to use the system of elections to stack the deck in their favor, if they are the party in power, or to benefit incumbents generally, or simply to exclude third parties, or efforts to make the two parties more receptive to independent voters.

It is not clear, as I have intimated, that Ackerman and Fishkin will want to embrace this trend. It is even less clear that they should want to embrace this trend. Again, if the goal is deliberation, this goal might not be furthered by excluding third parties from the debate, and allowing the two parties to have the entire field to themselves, if not in the televised debate, then almost certainly in most citizen assemblies, where third parties will not have the infrastructure to support “opinion leaders for their team on Deliberation Day.” But the point goes deeper than this. It is that, if the structure of deliberation day does not work against the entrenchment of the two parties (and the subsequent limiting of debate) than it unwittingly furthers that entrenchment. What Ackerman and Fishkin see as revitalizing local party politics is, viewed from another angle, simply exploiting the disadvantages third parties have in entering into the political process. Nor can the Ackerman and Fishkin proposal be seen as dictated by necessity, say, by avoiding too many candidates. Certainly deliberation

---

30 *DELIBERATION DAY* 32.
31 For a good overview of different theories about the role of parties in a democracy, see Nathaniel Persily & Bruce E. Cain, *The Legal Status of Political Parties: A Reassessment of Competing Paradigms*, 100 *COLUM. L. REV.* 775 (2000).
day could bear three or even four presidential candidates, which suggests that the poll number for entry could be set lower (or made by other criteria, for example if the candidates had polled at a certain percentage in the previous presidential election).

Further, even if third parties were not invited to the debate, they could participate in other ways, say, by being allowed to put one issue in front of the major party candidates – something which under Ackerman and Fishkin’s regime is wholly under the discretion of the two major party candidates. Finally, more citizen assemblies could be televised, to reduce the need for massive numbers of party members necessary to have one show up at each assembly. Again, the point is not that these proposals are obviously correct, but that they can be made, which shows that Ackerman and Fishkin made choices about how to structure deliberation, and that structure works to the detriment of allowing certain voices into the debate, hurting not only the excluded parties, but also the possibility of robust deliberation itself. In doing so, they violate a condition on successful deliberation that they themselves introduce, the Meiklejohnian idea of “normative completeness”: the idea that for full and robust debate there must be “confrontation with a series of different views.”

Ackerman and Fishkin could reply that they are doing the best that they can to deepen deliberation within the two party system, rather than to find ways in which to accommodate other parties. This is a defensible position, but it needs defending. We would need, from Ackerman and Fishkin, a defense of an ideal of deliberation that puts a premium on having two political parties debate, rather than having three or four candidates share the stage. It is not obvious that two candidates are better than three or

32 Id. at 182.
33 [Footnote omitted for blind review]
four, especially if the tendency for the two major parties is to move ineluctably towards the center. Deliberation over an increasingly narrow set of differences does not seem to exhaust the possibilities of robust deliberation. Indeed, Ackerman and Fishkin may share this view: they speak (wistfully?) of a Green party candidate making a run in the year 2020. But the point of the preceding is that the structure of deliberation day gives the major parties an advantage and may even preclude any third party candidate gaining momentum. It is no good to hope for a possibility that their very proposal makes it harder to obtain.

III. Gerrymandered Districts

In the last part, I looked at how Ackerman and Fishkin’s proposal arguably limited debate, rather than expanded it, by instituting a deliberative structure that in effect (if not by intention) excluded third parties from deliberation. The focus there was on what was the topic of deliberation: would it be the proposals and ideas of the two major parties, which already enjoy a huge institutional advantage? Or would it be the concerns of third parties, who are often limited by not even being able to get on the ballot in some races? In other words, the question was, who decides what concerns get on the table? My thesis was that by making certain choices, Ackerman and Fishkin, did not fight two party entrenchment, but rather increased it. But there is another way that debate can be limited, not by restricting what options get on the table, what the content of the debate is (whether it will be the issues of the two major parties or of third parties), but by the selection of who among the citizens (rather than the candidates) will participate in the

34 DELIBERATION DAY 166.
debate. There are many ways that we could approach this issue with relation to Ackerman and Fishkin’s proposal. Here we might reference commonplace (but nonetheless valid) objections to deliberative democracy that it favors those who are well educated and articulate, as opposed to those who lack effective speaking skills, who may be less inclined to voice their concerns on deliberation day.35

We might also note the evident class bias in a sentence such as this one, when Ackerman and Fishkin consider what might be the cost of using schools as spaces for deliberation day activity: “The answer is straightforward once you recall that the schools are already closed on Presidents Day while kids join their parents for ski weekends and holiday sales.”36 The possibility that some school-age children and their parents might have jobs and need to work on Presidents Day does not seem to enter Ackerman and Fishkin’s ken. Nor, one might suspect, do they take seriously how workers at jobs where they have little autonomy might feel about using their time off to deliberate rather than staying on the job.37

So there may be ways in which deliberation day “selects out” certain people from the class of deliberators. It may do this even though everyone shows up, by giving an implicit preference to those who are more articulate, or it may do it by putting barriers up against some people from showing up in the first place, by not effectively countering the (legitimate) incentives some may have to stay away from deliberation day and work, for instance. But these are not the problems I want to focus on, although it is clear that they

---
35 Richard Posner makes some of these points in his review of Deliberation Day. See Richard Posner, Smooth Sailing, LEGAL. AFF. (January 2004) (“I sense a power grab by the articulate class whose comparative advantage is—deliberation”).
36 DELIBERATION DAY, 136.
37 Ackerman and Fishkin mention at several points problems about childcare, but offer no real proposal to deal with the (obvious) problem.
deserve more detailed treatment. Moreover, it is not clear that these kinds of problems affect deliberation day uniquely, as opposed to any effort at encouraging deliberation. Further, they do not touch on the present concern of this paper, which is to show how the structure of election law may make a difference to how citizens deliberate on deliberation day, as opposed to how social or other facts may influence deliberation. This is a more general concern.

To turn to the concern of this paper: How might the structure of American elections dictate who participates in deliberation day? In order to get at what I think is a problem in the Ackerman/Fishkin proposal, I first need to describe the background to their extension of deliberation day past presidential elections, into “Congress day.” For presidential elections, the groupings of citizens in large assemblies can be done based on convenience. Although Ackerman and Fishkin do not give much in the way of detail on this point, we can assume that people will meet at places that are near to then, or accessible via public transportation; they may even join friends at some deliberation forum, even if it is not very close to where they live. It does not matter, at least for presidential elections, that people from various parts of a state (or even from out of the state) meet to debate and discuss the positions of the two major party presidential candidates. But location becomes relevant when it comes to Congress day. Since citizens will be voting for their Congressperson to represent their locality, they will be meeting and debating only with other people in their state (in the case of Senators) or in their districts (in the case of Congressman). Here, local boundaries matter, and we cannot accept the fluid boundaries that might be the norm in presidential elections. In the

38 See generally Iris Marion Young, Activist Challenges to Deliberative Democracy, in DEBATING DELIBERATIVE DEMOCRACY 102 (James S. Fishkin & Peter Laslett, eds. 2003).
39 DELIBERATION DAY, CH. 5.
end, one can only vote for a representative in one’s own district. And geographical boundaries matter in a good way: they matter because they will dictate that certain matters of genuinely local concern will be on the agenda, rather than a generic and broad national agenda.

So Ackerman and Fishkin propose that for Congressional elections there also be a deliberation day, albeit on a smaller scale. But Ackerman and Fishkin are aware that there is a problem with Congressional races that does not affect the presidential race, and which reflects the point made in the previous paragraph. In the presidential races, barriers between districts don’t matter much: it won’t make a difference whether you attend the deliberation day meeting in your own district or the neighboring one, or perhaps even one in another state. In the case of Congressional races, state and local districts matter, and because of partisan gerrymandering, some districts will involve races that are simply not competitive. Districts will lean heavily towards the Democratic or Republican party, with the result that it may not pay for the other party even to put up a candidate, or to give more than merely token opposition to the candidate who benefits from the gerrymander. Ackerman and Fishkin even go so far as to say that if there is no major party challenger in a race, “the celebration should be canceled if polls show that third-party candidates have failed to gain the support of 20 percent of likely voters.”

Notice again that even when they are attentive to a structural problem that can affect the outcome of elections (partisan gerrymanders), Ackerman and Fishkin fail again and again to give possible third-party candidates any breaks. But this ignores how third-party

---

40 As has been said: “you think that on election day, you get to pick your representative. In fact, what happens is that in districting, your representatives pick you.” For an overview of the current election law debate on partisan gerrymanders, see Samuel Issacharoff & Pamela S. Karlan, Where do Draw the Line?: Judicial Review of Political Gerrymanders 153 U. PA. L. REV. 541 (2004).
41 DELIBERATION DAY 105.
candidates may benefit in a disproportionate way by being part of a deliberation day – it may give them the publicity they need to be taken seriously. If a major party fields a candidate, however token, deliberation day takes place. If a third party candidate polls fifteen percent, and is the only opponent against a major party candidate, deliberation day is cancelled.\(^\text{42}\)

Suppose, however, that there is a race between congressional candidates of the two major parties, in a district that has been gerrymandered along political lines, that is, where one candidate enjoys a huge advantage because the district has been designed to hold candidates from his or her own party.\(^\text{43}\) Now there may be a problem not only with who the citizens are exposed to, both in their small groups and in the citizens’ assemblies, but with the composition of the citizens themselves. By hypothesis, we have assumed we are in a gerrymandered district, which means that most of the people attending deliberation day will be of the same party and more generally of the same ideological disposition. We now have the conditions set for what Cass Sunstein has famously called “group polarization.”\(^\text{44}\) By being exposed to people who share opinions and who know facts that support one side of the debate (and who do not know the facts that may support the other side) groups that deliberate together, Sunstein suggests, will tend toward the extremes of their positions. Right-wing groups that deliberate together will become more right-wing; ditto with left-wing groups. The point is that the structure of elections on the Congressional level creates the circumstances for deliberation not to be open, but to have

\(^{42}\) In some states, this also may make a difference in whether third parties get on the ballot in subsequent elections.

\(^{43}\) Note that there will be districts that are “packed” with all members of the party either because the majority party wants to have a safe margin of victory in that district, or because they are trying to put all of the other party’s voters in a single district (to reduce their chances of winning other districts).

it tend towards ever more close-mindedness and strident opinions. Sunstein and some of his co-authors have confirmed this hypothesis in experiments designed to mimic initially polarized debating. True to the hypothesis, deliberators who were already leaning in a similar way (as citizens in partisan districts are) became more extreme in their original positions.\footnote{David Schkade, Cass R. Sunstein & Reid Hastie, \textit{What Happened on Deliberation Day?} (June 21, 2006) (unpublished manuscript) available at \url{http://papers.ssrn.com/sol3/papers.cfm?abstract_id=911646}.}

Ackerman and Fishkin address Sunstein’s worry about the pathologies of deliberation, i.e., how polarization can make deliberation a vehicle for “groupthink and issue polarization.”\footnote{\textit{Deliberation Day} 61-5.} But there responses to Sunstein are flawed in a number of respects. First, they refer only to Sunstein’s early studies on polarization among jurors. Ackerman and Fishkin are right to notice that the context of jury deliberation and deliberation day are different, but Sunstein has since replicated his findings in contexts that more resemble what deliberation day would look like.\footnote{See Schakade, Sunstein & Hastie, \textit{supra} note 43.} Second, and more importantly, they respond to Sunstein only in the case of presidential deliberation day, and not on congressional deliberation day. But for reasons I explored above, geographical boundaries are much more salient when it comes to Congressional races, and the conditions in some congressional races will exactly mimic those conditions in which Sunstein finds an increasing polarization of voters. Third, even if deliberators on deliberation day do not have to reach a conclusion or take a side on an issue, polarization may still affect what issues get discussed in the first place, and what sorts of things candidates should care about. This will create pressure towards polarization, even if it is not convergence on a single answer or position. Last, Ackerman and Fishkin say that issue polarization and
groupthink will be minimized when deliberators shift from their small groups to the large assembly and back again. But this would be true more of the presidential debates, where we can expect people from all over and who will not have been pre-selected for their ideological leanings. This is not the case, as we have seen, when we consider partisan districts. And indeed, the shift from large groups (where the minority party candidate will at least have a voice) back to small groups (where it is only citizens who will be primarily from the majority party, by hypothesis) may work to counteract dissent, by snuffing it out when the citizens return to their small groups.

To be fair, Ackerman and Fishkin are aware of the problem of partisan gerrymandering, and they recommend, in an aside, “relying on a nonpartisan commission to draw district lines.” This, however, is in reference to the problem that many races will be non-competitive, and deliberation day may have to be canceled when there is no major party candidate and the third party candidate does not poll more than twenty percent. My claim above has been that there is a problem in a gerrymandered district, and not simply because of lack of competition. This is a problem with the candidates. There may also be a problem, though, with the composition of the group of citizens who deliberate, even when there are two major party candidates running. The point once more is a structural one. If we are to have robust deliberation, the composition of the group deliberating should be a certain way, and the structure of American law gives us good reason, in the context of Congressional races at least, that the conditions for robust deliberation will not be present. Indeed, deliberation might even be counterproductive: resulting in people to shift to even more extreme positions, based on the limited information and the group pressures they confront on deliberation day. It suggests,

---

48 DELIBERATION DAY 105.
indeed, that Ackerman and Fishkin’s optimism about the effects of deliberation is misguided. Ackerman and Fishkin write that, “if deliberation day succeeded, everything else would change: the candidates, the media, the activists, the interests groups …”49

However, if deliberation occurs in a context where citizens become more extreme – such as in a successfully gerrymandered district – everything would not change, and polarization could become worse. All of this suggests that if we do not attend to structural problems first and work from the top down, rather than expect deliberation to effect changes from the bottom up, deliberation will simply not have the benefits Ackerman and Fishkin promise.50 In other words, there will be a trade-off between immediate deliberation, and better deliberation.51

IV: Race and Representation

In the previous two sections, I looked at whether the structure of election law might not work against better deliberation, rather than for it. In part I, I considered that the proposal by Ackerman and Fishkin might further entrench the two parties, by giving an advantage to them because of their pre-existing institutional advantages. The result would be that third parties, which already struggle in presidential elections, would be locked out of deliberation day. In part II, I suggested that the pattern of districting in America meant that deliberation among citizens in gerrymandered districts might lead to

49 DELIBERATION DAY 3.
50 The Supreme Court has so far avoided deciding that partisan gerrymandering is unconstitutional. For a comprehensive statement of the Court’s refusal to intervene, see the majority opinion (authored by Antonin Scalia) in Vieth v. Jubelirer 124 S.Ct. 1769 (2004).
51 Why would we favor immediate, poorer deliberation over later deliberation? Perhaps we felt that deliberation (even bad deliberation) had a legitimating function, as opposed to merely being a device to produce better decisions. This would make no deliberation worse than even polarized deliberation.
what Cass Sunstein has called “group polarization.” Ackerman and Fishkin, admittedly, do recognize the problem of partisan gerrymandering in the abstract, and make recommendations about what to do about it. But the point is one of priority. Should we go ahead and have citizens start deliberating, or should we first look at the structures of American election law that might limit deliberation, or cause the deliberation to be less than ideal?

In this Part, I take up a concern which is in a way orthogonal to the discussion of the previous two sections. In the previous two sections, I took for granted that having better citizen deliberation was desirable. The question was only, does Ackerman and Fishkin’s proposal seem likely to make deliberation better, given the structure of election law, or to make it worse? Now, in this Part, I want to consider the different question of whether more citizen deliberation is always better. What do I mean by this question? I mean, in the first instance, that there may be some goals that we would want to promote that more deliberation would hinder. In this case, we would not want to maximize citizen deliberation, but to restrict it. Indeed, as I go on to suggest in this Part, there may be a trade-off in terms of levels of deliberation.\(^5^2\) Limiting deliberation at one level may lead to the election of a representative who at another level (at the level of legislative debate, say) might make for better deliberation. Again, in thinking about this problem, I take my example from the structure of American election law; in this case, it involves the question of ensuring minority representation. Here, I want to propose, we do not merely have a potential question about whether deliberation as a value should trump other values, but a

---

\(^{5^2}\) In Parts I and II, by contrast, the question was about trade-offs between kinds of deliberation: two party or multiparty? Polarized or not?
question about whether deliberation at another, higher level, should be preferred over better citizen deliberation.

At least since the Voting Rights Act was passed in 1964, there has been a concern to elect more minority representatives, and this has been done by drawing districts that are majority minority – sometimes referred to as “safe” minority districts.\textsuperscript{53} At one angle, this is simply a matter of rectifying a past wrong: districts had been historically drawn to deprive blacks of the ability to elect a candidate of their choice. On this understanding of the need for majority minority districts, the point of drawing districts favorable to black candidates, would, in principle, become otiose once it was felt that the past wrong was completely, or nearly completely rectified. But we might consider another justification for race-conscious districting, apart from the desire to right past wrongs, and give blacks an electoral voice where they have previously been deprived of one. We might think that having a diversity of voices at the legislative level is a good thing in itself, and so electing minority candidates would be good for this reason. This justification of race-conscious districting can be found in the Supreme Court’s recent affirmation action cases, for instance.\textsuperscript{54} It is better that students be exposed to diverse viewpoints and positions, and this goal can be served in part by instituting affirmative action policies. We can imagine a similar claim on the level of race-conscious districting. And, what is more, it is not too hard to see this argument being made in terms of increasing the quality of diversity at the legislative level: the more diverse the debating body, the better the quality of debate.

\textsuperscript{53} For a history of the Voting Rights Act and its aftermath, see ABIGAIL THERNSTROM, WHOSE VOTES COUNT? (1987).

\textsuperscript{54} See Grutter v. Bollinger, 549 U.S. 479 (2003) (holding that diversity might be considered as essential to a university’s educational mission).
Bracket, for the moment, the precise merits of this argument for majority
minority, or “safe” districts; one does not have to be persuaded of it to see that it might
have some claim to our assent, and more importantly, to how we think about elections.
What we should notice at this point is that should we agree that increasing the quality of
deliberation at the legislative level (and we think increasing minority representation
would contribute to this goal), then we might have to achieve this through limiting debate
at the citizen level, or at least potentially diminishing its quality. Better deliberation on
one level may mean worse deliberation on another level. But now what we have is a
tension between levels of deliberation: what might lead to better deliberation at one level
(the representative level) might only be achieved by making deliberation worse at another
level (the level of citizens). Importantly, the trade-off is not between deliberation and
some other value (national security) but about a tension between two levels at which
deliberation should occur. What level should we prefer?

To make this more problem concrete, consider the Supreme Court’s pivotal
decision on race districting, Georgia v. Ashcroft.55 At issue in that case was Georgia’s
compliance with the Voting Rights Act, which as interpreted by the Court, required that
certain “covered” (i.e., covered by the Voting Rights Act) states not “retrogress” when it
came to minority representation, when they are proposing a change in the districting plan
of a state. The issue, in the case, was what retrogression really meant. Did it mean that
the number of minority representatives in Georgia had to stay the same under the new
districting plan? Or could a new districting plan allow for minority representation in
other ways, such as through the creation of districts where black voters might have the
potential to shift an electoral outcome, rather than control it (so-called “influence”

districts)? The decision of the Court, in an opinion written by Justice Sandra Day O’Connor, ruled that Georgia’s plan, although it did not necessarily keep the same number of districts that were certain to elect black candidates, it was permissible. Why?

It was OK, she said, if a state wanted to try a districting plan that would try to preserve minority representation by creating “coalition” or “influence” districts, as opposed to maintaining districts which guaranteed that black candidates were elected. Citing Hannah Pitkin, she argued that “descriptive” representation was not the only kind of representation we should try to secure; we should also treat favorably plans that would help “substantive representation as well.”\(^5\) \(^6\) The strategy evinced by the Georgia plan, O’Connor wrote, “has the potential to increase ‘substantive representation’ in more districts, by creating coalitions of voters who will together help to achieve the electoral aspirations of the minority group.”\(^5\) \(^7\)

Note the language of Justice O’Connor’s opinions: one point in favor of the Georgia plan is that enables coalitions of voters to work together to endorse a shared candidate. From this language, we might be able to see her opinion as one which Ackerman and Fishkin would approve of. By creating “influence” districts, where black voters may influence the vote, but not determine it, citizens will be forced to deliberate with one another, to create coalitions across racial lines in order to elect a candidate that will represent both of their sets of interests.\(^5\) \(^8\) Citizen deliberation, on this plan, we can surmise, would be increased. But the tradeoff to this is that a candidate might be elected who did not adequately represent minority interests. The result of having to bargain and

deliberate with other citizens might mean that the minority preferred candidate might lose (as O’Connor acknowledges\(^5^9\)). This might mean that minority interests are not fully represented at the Congressional level. It might also meant that deliberation at the Congressional level might well be poorer: a candidate who represents a coalition of interests may have less of a defined viewpoint than a candidate who is elected from a majority minority district, and who has the freedom, perhaps, to take positions that would not otherwise be represented in Congress.

So here we have a potential tradeoff within the value of deliberation, as opposed to trade-offs in the kind or quality of deliberation. Which level of deliberation should we prefer? Should we limit some citizen deliberation – such as the coalition building that might result from the creation of influence districts – in order to make possible better and more diverse deliberation at another level? To be sure, much of the above argument depends on premises that are controversial, e.g., that coalitions could not recognize that minority candidates might be a good thing, and that representatives from safe minority districts will necessarily bring a diverse viewpoint from Congress. But the point is larger than the particular example. The point is the structural one about levels of deliberation, which we have to consider so long as we are not merely talking about direct democracy, but about representative democracy.\(^6^0\) Once we have another level, we inevitably have to consider the relationship between the two levels, and this problem will emerge in many different contexts. Indeed, we might have even considered the question in terms of partisan gerrymandered districts. Is it better to have voters become more extreme, so that those candidates with more extreme viewpoints will be elected to Congress? I did not

\(^{5^9}\) Georgia v. Ashcroft at PIN.

\(^{6^0}\) On the relation of direct and representative democracy, see Michael Neblo, *Thinking Through Democracy* 3 ACTA POLITICA 10-11 (2005).
consider this issue in the context of partisan gerrymandered districts, because I assumed (perhaps mistakenly) that an excess of partisanship in representative deliberations might be a vice, where with minority districts, it is an open question whether we might want to increase the number of blacks and Latinos in Congress, not merely for the sake of remedying past exclusion, but for the sake of deliberation that takes the interests of many different sorts of constituents into account.

V. Conclusion

In closing, I want to put my criticisms of Ackerman and Fishkin’s proposal in some context, to make clear the aim of those criticisms, and their limits. I have four points to make. First, my criticisms are surely not made in the spirit of undermining the whole idea of deliberation day. Indeed, I think something like deliberation day is very promising and my criticisms could be read in a way to suggest emendations to Ackerman and Fishkin’s idea. For third parties, I offered that they (third parties) might be able to supply some of the issues that the deliberators on deliberation day undertake to discuss, even if the third party candidate does not poll the required 15 percent. More deeply, I wondered whether third party candidates might be invited to the debate, even if they have not reached 15 percent in the polls. This might serve the interests of deliberation by exposing the deliberators to more points of view. With partisan gerrymandering, Ackerman and Fishkin agree that this problem needs to be addressed; my only emendation to their proposal was that failure to address this problem first might result in

61 In fact, I would favor inviting the third party candidate to the debate, even if the other parts of deliberation day were kept the same.
deliberation being less productive and more skewed than it otherwise might be. So far from a deep disagreement between me and Ackerman and Fishkin, this is a comparatively minor family squabble about priorities. As for the problem of race and elections, this is a deep one, and it is no fault of deliberation day that it does not solve it. Perhaps one simply has to make a choice between robust citizen deliberation and diversity of representation. Or perhaps one could find a solution that would be able to reconcile these two levels of deliberation. All of this is to say that none of the three major points above are addressed globally, at the very idea of a deliberation day. These points, instead, are meant to show that if deliberation day does not recognize and address the structure of American election law, its aims and its purposes might be frustrated. And this is an argument that is done in the spirit of those aims and purposes.

Of course, Ackerman and Fishkin may disagree with the direction these proposals could take us. This takes me to the second point I want to emphasize. Ackerman and Fishkin may feel that it is better to have deep and robust two party debates, because offering voters two clearly defined choices is better than having a cacophony of many voices in a discussion. They might prefer even polarized discussion on Congress day to no debate at all. And they might reject the idea that it is better to limit citizen debate in order to have more diverse debate at the level of representatives. All of these options are perfectly defensible. The point that my paper suggests is that they need a defense, because there are other options available. When Ackerman and Fishkin make a proposal that opts for one of these conceptions of debate, they are pushing other options off the table. In the words of my title: they are opting for one horn of several dilemmas that exist between kinds and levels of deliberation. In the same way, the present structure of
American election law makes trade-offs, by entrenching two party candidates, by allowing partisan gerrymanders, and constructing minority “safe” districts. This system is again defensible, but it needs a defense, in terms of the two party system, in terms of the good of diverse debate, etc. I have intimated throughout this paper that perhaps a defense of the system can be made in terms of a certain ideal of deliberation. But, as I have also stressed, that ideal of deliberation is not the only one out there.

My third clarification may already be implicit in what I have said, but it is important to bring out. Recently, there have been many critics of the good of deliberation itself. It is hopelessly misguided, it is argued, to think that deliberation between citizens can ever really be productive. For example, in a recent book, Fernando Teson and Guido Pincione argue that “political deliberation does not serve cognitive goals, and it often drives us further from the truth.” I do not share the pessimism of these authors. Or rather, I do not share their pessimism about the possibilities of democratic deliberation. Ackerman and Fishkin make a powerful case that our current state of deliberation is very poor; but this does not mean that it cannot change. The problem, Ackerman and Fishkin claim, is one of how politics is currently organized, and not about the intrinsic possibilities or limitations of deliberative rationality. Politics is not currently organized around rational persuasion, but rather around sound bites. By proposing deliberation day, Ackerman and Fishkin aim to make giving arguments the center of campaigns: it puts a premium on articulating positions that will stand the test of questioning and discussion. Again, my argument in this paper can be seen in the service of this larger

---

62 At least, this is the suggestion. Perhaps American election law should not be directed towards any one ideal, but rather it may instantiate a number of conflicting ideals: free expression, equality, association, etc.
project. My claim has been that if we do not recognize certain existing structural impediments to better deliberation, or trade-offs we might be forced to make between kinds of deliberation, we might end up increasing rather than reducing certain pathologies of deliberation. The barriers to effective deliberation are deep, a fact no one need deny. The appeal of Ackerman and Fishkin’s project is that it recognizes the extent we may have to go to remove those barriers. My essay has merely pointed to a few additional barriers we will need to overcome.

But how to overcome those barriers? Here I reach my final point of clarification, and it may represent a real point of difference between my approach and the approach that Ackerman and Fishkin take. As I have stated repeatedly throughout my paper, Ackerman and Fishkin have a faith that if we unleash citizen deliberation, then reform will emerge, from the bottom up. They say, as I have quoted them, “if Deliberation Day succeed, everything else would change: the candidates, the media, the activists, the interests groups, the spin doctors ….”\(^{64}\) The idea is not outlandish, even if it is a little optimistic. If there were a deliberation day, many incentives would change. But it is wrong to think that citizen deliberation, by itself, can make these changes. Indeed, if the electoral structures I have pointed to are not changed first, then deliberation may well be counterproductive. It will not be as wide-ranging as we might have hoped, with the result that the two major parities become more entrenched, and debate as result will become more impoverished (at best) or polarized (at worst). So in many cases we will have to start from the top down. And this is where I return to my major theme, which is that deliberative democratic theory will need to pay attention to election law, if its proposals are to be realistic and effective. For it is precisely election law and at the limit the

\(^{64}\) DELIBERATION DAY 3.
Constitution that dictates the larger electoral structure that I have been describing. As the Supreme Court “constitutionalizes democratic politics,” in the words of Richard Pildes, the structure of election law increasingly becomes inscribed into the structure of the Constitution itself. Is the Constitution silent about partisan gerrymanders? About the rights of third parties? Insofar as more deliberation will make a difference here, it will not be the deliberation of ordinary citizens in assemblies first and foremost, but the deliberations a different body, arguably more august but still potentially partisan – the Supreme Court.

65 Pildes, supra note 8.
